# PARKER'S POINT

by Scott D. Parker, ENFINITE Executive Director

## Air Support

“If you don’t tell your story, someone else will.” – Unknown

For decades, Enfinite members have been on the forefront of protecting the environment from the potential negative impact of industrial liquid waste.

Our industry does not generate any of the materials that we collect and responsibly manage. The important work our members provide in protecting the environment are not sufficiently understood or appreciated by the general public. Worse, many members struggle with obtaining permits in local communities because of misperceptions about our industry even though their work is vital to those communities.

Enfinite members put in the effort to help educate local government officials, civic groups and the public at large about the importance of their business and dispel misperceptions.

Enfinite will be adding ‘air support’ to the ground efforts of members in telling our story.

Recently, I had the privilege of being a guest on the Environmental Transformation Podcast. The nationally recognized show interviews leaders in environmental services and sustainability. This opportunity allowed me to highlight the work our members do every day. See page 22.

After meeting with editors for Recycling Today and Waste Today, I was asked to draft an article for their magazine to help educate the broader waste industry about the services our members provide. The article, titled “Industrial Liquid Recycling: Infinite Ways to Protect our Planet”, is reprinted on page 24 of this magazine. The article promoted members as being in the business of sustainably by giving liquid waste new life and creating a circular economy where nothing goes to waste.

In early 2026, Enfinite will be launching a state-of-the-art website that will provide the largest public relations effort ever on behalf of the industrial liquid recycling industry. It will feature high-level overviews of the different materials our members collect with logos and links to each member providing that service. The content on the pages will be drafted by professional writers and will be available for all members to use.

By having members use the same language in describing our business sectors and the environmental benefits they provide, our story will be consistent and amplified.

## Valicor Acquires ECO-First

ENFINITE member Valicor Environmental Services announced it has acquired ECO-FIRST, Inc., a provider of environmental and waste management services in West Virginia. Steve Hopper, Chief Executive Officer of Valicor stated, "ECO-FIRST brings strong capabilities and commitment to sustainability. Together, we will continue to expand our environmentally responsible solutions and serve a growing base of customers across West Virginia and the surrounding states."

## Norway Shipper Fined \$2M Oily Waste Discharges

V Ships Norway AS has pleaded guilty to violating the Act to Prevent Pollution from Ships and was sentenced to pay a criminal fine of US\$2M. Acting Assistant Attorney General Adam Gustafson of the Justice Department's Environment and Natural Resources Division said dumping oil-contaminated waste into the waters around ports and coasts violates the law and poses a health and environmental hazard. ENFINITE members work every day to prevent pollution like this from occurring. The association is embarking on efforts to promote the importance of our industry and the broad capabilities available from members to protect the environment.

## ILMA Urges Justice Department to Examine EPR Laws

ILMA submitted comments to the U.S. Department of Justice (DOJ) and called for federal action to halt the growing patchwork of state extended producer responsibility (EPR) laws for plastic and paper packaging. "Independent lubricant manufacturers cannot thrive under a fragmented, competitively uneven, state-by-state regulatory system," said ILMA CEO Holly Alfano.

The first state program to be introduced is in Colorado. An implementation dues of \$0.56 per gallon for lubricant products packaged in any type of container up to 15 gallons are paid to the Lubricant Packaging Manufacturers Association powered by Interchange 360 (LPMA). LPMA uses those dues to manage the collection and processing of lubricant packaging. The program covers all petroleum and petroleum related products and packaging up to and including 15 gallons, including oil-based lubricants, grease, antifreeze, engine additives, and other fluids typically used in transportation and mechanical applications and where these containers are often comingled with oil and antifreeze containers at generator sites.

## Clean Harbors Incineration Proven to Destroy PFAS

A study out of the U.S. Environmental Protection Agency (EPA) conducted in concert with the Department of Defense (DoD) and Clean Harbors, offers what may be the most compelling commercial-scale solution yet. Performed in November 2024 and released in September 2025, the study validates that Clean Harbors' high-temperature, RCRA-permitted incineration process destroys PFAS over 99.9999% effectively, meets or exceeds the strictest EPA emissions standards, and does so at scale.

## EPA Backs PFAS Hazardous Substance Designation Under CERCLA

On September 17, 2025, EPA and the Department of Justice declared that the government would continue to defend EPA's rule designating two PFOA and PFOS, as hazardous substances under the Comprehensive Environmental Response, Compensation, and Liability Act ("CERCLA"). EPA's decision to stand behind the designations has significant and potentially costly implications for chemical manufacturers, manufacturers of products containing PFAS, waste management and wastewater treatment facilities, and real estate developers, among others.

## Spirit Energy Services Announces WV CWT

ENFINITE member Spirit Energy Services announced the development of its new state-of-the-art Centralized Waste Treatment (CWT) operation in Weirton, WV. Operating under Steel Valley Wastewater, LLC, the new facility will provide advanced, non-hazardous industrial wastewater pretreatment services. It will feature laboratory QA/QC capability as well as drum consolidation and processing systems for non-hazardous industrial solids.

## Senators Introduce English Proficiency CDL Bill

Legislation that would enhance English proficiency requirements for truck drivers nationwide was recently introduced in the Senate. The bill would require commercial driver license holders to understand English and be able to adequately communicate in the language. The legislation also would disqualify commercial drivers who fail requisite English communication standards.

## ENFINITE Working with AMAP to Include VTAE

The Association of Modified Asphalt Producers has decided to include Vacuum Tower Asphalt Extender (VTAE) in their PCR (Product Category Rules) for asphalt modifiers. Fellow ENFINITE and AMAP members Safety-Kleen, Crystal Clean and Blue Tide have been working on this with AMAP.

## VLS Expands West

ENFINITE Member VLS Environmental Solutions announced the acquisition of Industrial Waste Utilization (IWU) and AA Sydcol, two California- and Arizona-based providers of hazardous and non-hazardous waste solutions. “By welcoming Industrial Waste Utilization and AA Sydcol into the VLS family, we are reinforcing our commitment to the West Coast with a full-service sustainability-driven platform available to our clients,” said John Magee, CEO of VLS Environmental Solutions.

## **GFL Acquires Plummer’s Environmental Services**

ENFINITE Member GFL Environmental acquired Plummer’s Environmental Services. Plummer’s, located in Grand Rapids, Michigan, offers industrial and municipal environmental services including operating a CWT.

## **AI and Next Era of Commercial Vehicle Safety**

Fleet safety’s digital evolution is driving a powerful transformation in transportation. While new technologies promise to make roads safer, the pace of change can be overwhelming. For safety-focused managers, the emerging challenge is determining which tools are best suited for your operations and preparing for the future of fleet safety. To address these contemporary challenges, FleetOwner reached out to several leading transportation technology providers to ask about the solutions fleets are underutilizing and to predict where commercial vehicle fleet safety is headed in the second half of this decade.

## **AI Transforming E-Manifest/Compliance**

It has been nearly three years since the first release of OpenAI’s ChatGPT, and the prevailing narrative is that professionals not yet integrating AI into their work risk being left behind. Executives and thought leaders often frame AI as an inevitability – an unstoppable wave of transformation sweeping through every industry, including those involving e-manifests and compliance.

## **Electrification to Trim Heavy-Duty Volumes but Boost Market Value**

A Kline & Co. report commissioned by ILMA finds that while commercial vehicle electrification will gradually reduce lubricant volumes in the U.S. and Canada, the overall market value will continue to rise through 2040, fueled by the adoption of synthetic and premium heavy-duty motor oils (HDMO). According to the study, total commercial vehicle lubricant (CVL) demand across both countries reached about 2.7 billion liters (713 million gallons) in 2024, split nearly evenly between on-highway and off-highway equipment. HDMO accounts for roughly 60% of this total, making it the cornerstone of the market.

## **ENFINITE Attended US Senate PFAS Hearing**

In late November, US Senate Committee on Environment & Public Works hosted a hearing to examine the future of PFAS cleanup and disposal policy. One of the panelists was Eric Gerstenberg, Co-CEO of Enfinite Member Clean Harbors. Enfinite Executive Director, Scott D. Parker, attended the hearing and will provide a report to the members at the Winter Meeting.

## **EPA Aims to Scale Back PFAS Reporting Requirements**

The U.S. Environmental Protection Agency (EPA) is proposing to scale back reporting requirements for per- and polyfluoroalkyl substances (PFAS). The changes would impact Toxic Substances Control Act (TSCA) section 8(a)(7). Under this section, EPA must require facilities that have manufactured PFAS in any year between January 1, 2011 and December 31, 2022, to report certain PFAS data to the agency.

## **EPA, Army Propose New WOTUS Definition**

The U.S. Environmental Protection Agency (EPA) and the U.S. Army released a proposed waters of the United States (WOTUS) rule this week, outlining a more “clear, durable, common-sense” definition of federally regulated waters under the Clean Water Act. The proposal follows the Supreme Court’s Sackett decision and reflects the Trump Administration’s policy direction. “When it comes to the definition of ‘waters of the United States,’ EPA has an important responsibility to protect water resources while setting clear and practical rules of the road that accelerate economic growth and opportunity,” said EPA Administrator Lee Zeldin in an EPA press release. “No longer should America’s landowners be forced to spend precious money hiring an attorney or consultant just to tell them whether a Water of the United States is on their property.”

# Full-Process Optimization for Oil Recyclers

## Oil Demulsifier

- Breaks emulsions faster.
- Custom blends boost production, recovery, and quality.
- Treats crude slop, crankcase oil, soluble oil, bunker fuels, industrial oil, and tank bottoms—including those with high ash content.
- Free testing yields tailored formula.

## H<sub>2</sub>S Scavenger

- Reduces corrosion to prevent pipe and tank degradation.
- Eliminates odors.
- Requires minimal floor space and installation investment.
- Treats oil, leachate and antifreeze.

## Caustic Replacement and pH Adjuster

- Safe, non-hazardous formula eliminates risk of caustic burns.
- Prevents pH spikes that corrode equipment.
- 40% less needed than caustic.
- Coagulates metal fines, other solids to reduce polymer use.
- No hazardous transport; temps down to freezing.

Scan to schedule a **FREE** end-to-end process analysis and optimization plan.

## ENFINITE Installs New Leadership

*Incoming leadership announces plans for a new website, expanded membership and national promotion.*

ENFINITE: The Industrial Liquid Recyclers Association installed its new leadership during the 2026 ENFINITE Conference & Trade Show in Aventura, Florida, naming Jeff Baxter of World Oil Corp. as the 27<sup>th</sup> president. Craig Patrick of Buck's Oil was also appointed as Enfinite's new vice president.

"It is an honor to serve as Enfinite's 27th President," Baxter said. "My focus is simple—continue developing the association and supporting its growth. More specifically, we will develop a new website that will connect members, attract new prospects, and increase event attendance; we will continue to expand membership across haz waste, field services and other industrial sectors; and we will promote the brand and culture nationally."

Baxter takes the gavel from Carrie Reese of Reworld, who led Enfinite through its rebrand and oversaw record membership growth of more than 100 new member companies.

Baxter oversees refining, recycling, terminal, and environmental service operations for World Oil Corp., the largest recycler of used oil, waste antifreeze, and oily water in California and the Western United States. He previously held leadership roles at Vertex Energy and Safety-Kleen and has been active in ENFINITE for over 10 years, chairing the Used Oil Committee, Conference Committee and serving on the Board of Directors. He holds engineering degrees from the University of Michigan, an MBA from the University of Chicago Booth School of Business and is a licensed Professional Engineer.

Enfinite also welcomed Jorge Gonzalez of GFL Environmental Inc. and Ken Hines of Valicor to its Board of Directors. Departing board members Ken Bentfeld of Valicor and Steve Lewis of BlueTide were recognized for their service.

## CRYSTAL CLEAN IS THE CLEAN CHOICE

Protecting The Earth's Resources By  
Helping the Business World Run Cleaner

Crystal Clean is a national leader in the environmental services market, providing the services needed to protect the environment and create a brighter, sustainable future.

With more than 130 facilities serving the United States, Crystal Clean has a team you can rely on for environmental and industrial services. Whether it's routine service or emergency response, our team is here for you.

The Industrial Liquid Recyclers Association  
2025 CONFERENCE & TRADE SHOW

## Industry Education & Networking Event Recap

November 12-15, 2025 | Aventura, Florida

The ENFINITE Conference & Trade Show delivered its strongest showing in years, marking a major milestone for the industry. This year's event drew over 350 industry professionals.

Attendees enjoyed a full schedule that included several engaging educational speakers, covering timely topics and offering valuable insights across multiple sectors of the industry. A major highlight was the keynote presentation by Johnny Joey Jones, which delivered a powerful and memorable message that set an inspiring tone for the event.

Another key moment of the conference was the installation of new leadership, marking an important step forward for the organization and its future direction. The energy continued through the closing celebration, which served as a lively and well-attended finale to an already impressive week.

This year's ENFINITE Conference & Trade Show not only set a new benchmark for attendance and programming but also reinforced the industry's momentum and sense of community.

Photos and presentations are available online to view. Scan the QR code below to access.

# Struggling with rising costs in your **used oil collection?**

Unlock the full potential of your used oil collection with OSCAL.AI's **Collection Optimizer**

OSCAL.AI's Collection Optimizer helps waste and recycling companies **maximize efficiency** by:

- ▶ Predicting when to service clients.
- ▶ Boosting collection volumes per trip.
- ▶ Optimizing resources and reducing carbon emissions.
- ▶ Solving challenges like labor shortages and seasonal demands.

Meet us at the ENFINITE Conference & Trade Show, Booth #115

Start improving your bottom line and contribute to a **greener future** today.

## ENFINITE Featured on Top Industry Podcast

Scott D. Parker, the Executive Director of ENFINITE: The Industrial Liquid Recyclers Association, was recently featured on the Environmental Transformation Podcast, a nationally recognized show that interviews leaders in environmental services, sustainability, and regulatory compliance.

In the episode, host Sean Grady welcomed Parker to discuss Enfinite's transition from its former identity as NORA and the association's mission to connect, educate, and protect the industrial liquid recycling industry. Parker outlined the organization's history, its regulatory advocacy efforts, and key challenges facing the sector—including PFAS management and ongoing driver shortages. He also highlights how Enfinite members are adopting new technologies and strengthening their sustainability strategies to meet evolving industry demands.

"Opportunities like this podcast help amplify Enfinite's mission and bring greater visibility to the work our members do every day," Parker said.

The Environmental Transformation Podcast is available on all major streaming platforms and features interviews with experts across environmental management, remediation, technology, and compliance.

# INDUSTRIAL LIQUID RECYCLING: INFINITE WAYS TO PROTECT THE PLANET

*Discover why industrial liquid recycling is essential for manufacturers seeking compliance, cost savings and greener operations.*

*ENFINITE Executive Director Scott D. Parker recently had the opportunity to contribute an article to Waste Today, a magazine that highlights the many industries involved in handling waste and other materials. The article below is reprinted from that issue.*

Life expectancy and quality of life have dramatically improved over the last century and a half—unlike any time in history.

In 1850, global average life expectancy was 29.3 years, and 87 percent of the world's population lived in extreme poverty.

Today, global average life expectancy is 73.2 years, and it is estimated that less than 10 percent of the world's population lives in extreme poverty.

How did this happen in just 175 years? In 1859, oil was discovered in Titusville, Pennsylvania. That discovery has been the driving force in generating those quality of life outcomes.

Petroleum products are used to propel vehicles, heat buildings, produce electricity and make plastic. From the oil in your engine to the metalworking fluids for manufacturing and everything in between, petroleum-based fluids are used across industries to get the job done.

While those positive results have been impressive, negative environmental impacts related to oil also have arisen. This includes the generation of billions of gallons of industrial liquids each year that no longer serve their purpose.

When left untreated, industrial liquids—unlike solid waste—easily seep into the ground, wreaking havoc on our planet and wasting valuable materials. This is where the industrial liquid recycling industry comes in.

The industrial liquid recycling industry is organized by **Enfinite: The Industrial Liquid Recyclers Associ-**

**ation**, based in Gainesville, Virginia. For more than 40 years, our 350 members have recycled and reused industrial liquid waste.

The industrial liquid recycling industry

Enfinite has been active in all legislative and regulatory initiatives related to the industrial liquid recycling sector at the federal and state levels to ensure the environment is protected.

This includes the promulgation of Environmental Protection Agency (EPA) 40 CFR Part 279, the used oil management standards, and EPA 40 CFR Part 437, the treatment standards for centralized waste treatment facilities (CWTs) managing industrial wastewater.

The association's efforts to ensure that these laws and regulations are reasonable and achievable have helped to form an industry that collects used liquids such as oil, fuels, wastewater, glycol, solvents and so much more to transform into usable products.

## **Used Oil**

The U.S. EPA has declared that 1 gallon of used oil can make a million gallons of fresh water undrinkable, making the collection of this material a clear priority.

Each year, 1.4 billion gallons of used oil are collected and recycled into base lubricants or fuel.

Approximately 70 percent of collected used oil is treated at rerefineries that create quality base lubricants, vacuum gas oil and marine diesel oil. The other 30 percent of the used oil collected is treated locally to create recycled

fuel oil that is used in applications such as heating aggregate at asphalt plants. This reduces the need for virgin energy sources.

The association adopted an official position in 2013 calling for a ban on used oil filters in landfills. It is estimated that 768 million used oil filters are generated each year, each containing 0.2-1 quart of oil. Used oil can leak out of these filters over time and could seep into and pollute the local water supply.

Enfinite members collect and responsibly recycle the steel, oil and paper in these filters.

### **Industrial Wastewater**

Manufacturers, landfills and many other industry sectors generate billions of gallons of industrial wastewater annually.

Enfinite members operate state-of-the-art CWT facilities that treat water in compliance with federal, state and local regulations, assisting public water authorities in providing clean drinking water.

Waste management companies that operate landfills often will contract with CWTs to manage their leachate water. When rainwater moves through the waste, it generates leachate water that can contain heavy metals, organic compounds and toxic chemicals. CWTs offer sustainable leachate treatment options to help keep landfills compliant.

Today, the major regulatory issue surrounding industrial wastewater is per- and polyfluoroalkyl substances (PFAS). Since the 1950s, many products commonly used by consumers and industry have been manufactured with or from PFAS. More than 9,000 PFAS have been identified, according to the National Institutes of Health. Since PFAS are “forever chemicals” and do not break down under typical environmental conditions, they will affect wastewater streams (including leachate water) indefinitely.

The U.S. EPA has a drinking water standard for perfluorooctane sulfonate and perfluorooctanoic acid with limits of four parts per trillion.

The drinking water standards will continue to put pressure on publicly owned treatment works (POTW) to look upstream at CWTs to limit PFAS entering POTWs and subsequently any drinking water resources (e.g., lakes and rivers) to which the POTWs discharge.

Enfinite members are at the forefront of numerous research and development projects, and many companies offer PFAS solutions to industry, including the removal of PFAS from contaminated waters, deep well injection and other disposal options that adhere to strict environmental regulations.

Enfinite is a member of the PFAS Regulatory Coalition, a broad collection of trade associations, companies and municipal entities engaged in and/or affected by

PFAS-related developments. The mission of the coalition is to ensure that PFAS are regulated based on sound science and that members, which neither manufacture PFAS nor control the addition of PFAS into the wastewater they treat, are recognized and understood for the environmental benefits they provide. Enfinite members provide critical wastewater treatment services to society and should not be punished by overly stringent and unnecessarily costly regulatory mandates. Through the PFAS Regulatory Coalition, Enfinite provides input to the U.S. EPA and others related to all proposed PFAS regulations.

### **Related Materials and Services**

Enfinite members also responsibly collect and recycle glycol, paint, solvent, ink, specialty waste, expired products and other industrial liquids. Members also provide industrial and field services, such as in-plant environmental services, tank cleaning and scheduled maintenance.

Because the industry operates a huge fleet of vacuum trucks, members respond to emergency spills and environmental events to assist first responders.

### **Hazardous and Specialty Waste**

Earlier this year, the association announced the **formation of its Hazardous & Specialty Waste Management Council**. Members increasingly are involved with hazardous materials and specialty waste as companies grow and diversify.

The mission of the council is to create a platform where members easily can connect and network. It also

aims to identify and address related opportunities and threats facing members while promoting the environmental importance of hazardous and specialty waste companies.

### **The Future**

Mergers and acquisitions are extremely prevalent in the industrial liquid recycling sector, leading to larger companies in the space that offer a much broader set of services than would have been the case decades ago.

The current movement related to onshoring production and manufacturing operations and the increase in chip manufacturing facilities and data centers will lead to generation of more industrial liquids that will need to be recycled.

The growing interest by the public and corporations regarding sustainability will drive opportunities for industrial liquid recyclers. As an industry, we need to do a better job of telling the story of the importance and necessity of the entire waste and environmental sector.

The Enfinite board of directors has approved funding for a new website, launching in early 2026, that will do just that. The site also will feature a new tool built for the general waste community to help find area specialty industrial liquid recycler service providers.

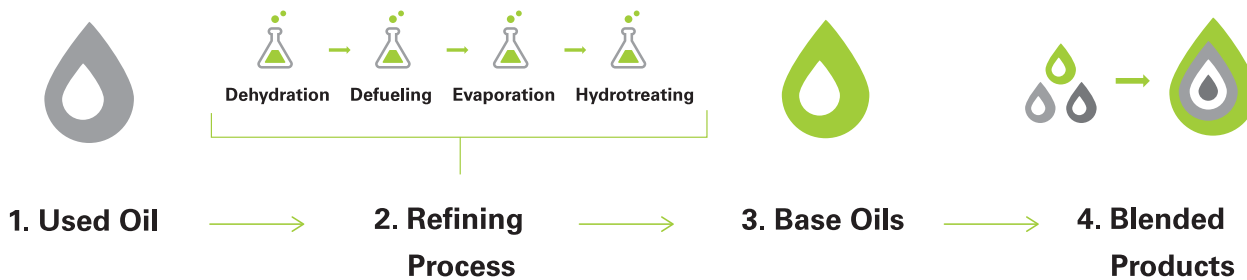

Industrial liquid recyclers are in the business of sustainably giving liquid waste new life and creating a circular economy where nothing goes to waste. When others see industrial liquid waste, industrial liquid recyclers see infinite potential and infinite ways to protect our planet. ■

# Discover the GFL Advantage

## We bring **your oil** back to **life**.

We collect, process and recover used motor and engine oils and related wastes from virtually any industry. Our unique, closed-loop process allows us to produce oils that meet and exceed industry standards. We safely collect, recover and process our customers' used oils into high quality refined products.

Proudly and responsibly collecting **over 73 million** gallons (**280 million** liters) of used oil across North America every year. Call **1.866.579.6900** for more information.

## Winter Meeting & EH&S Forum

FEBRUARY 25-27, 2026 • FORT WORTH, TEXAS

### 2026 ENFINITE Winter Meeting and Environmental Health & Safety Forum

The 2026 ENFINITE Winter Meeting and EH&S Forum, taking place in Fort Worth, Texas, offers a valuable opportunity for professionals across the sector to come together, learn and collaborate on the issues that impact our work every day.

#### **SPONSORSHIPS AVAILABLE:**

Sponsors play a vital role in supporting high-quality programming while gaining visibility with professionals dedicated to the industrial liquid recycling industry. See page 36 for more details.

#### **REGISTER TODAY:**

Registration for the event is available online, making it easy to secure your place and plan your participation. Early registration is encouraged to take full advantage of educational sessions, networking opportunities and all that the Winter Meeting and EH&S Forum has to offer. The registration form can be found on page 36.

Visit the ENFINITE website to learn more.

#### **HOTEL INFO**

The Crescent Hotel, 3300 Camp Bowie Blvd,  
Fort Worth, TX 76107  
(817) 661-1788

**Room Rate:** \$299/night + taxes (\$20 destination fee and \$30 resort fee waived)

**By Phone:** (817) 661-1788 (mention ENFINITE-022426ENI when booking over the phone)

Deadline to book in the ENFINITE block of discounted rooms is February 3, 2026.

#### **Travel Plans:**

DFW Airport (24 miles/28 minutes)

Dallas Love Field (38 miles/45 minutes)

North America generates approximately 1 billion gallons of used oil annually from industries such as new car dealerships, automotive services, commercial fleet operations, and manufacturers.

## TRANSFORM WASTE FLUID COLLECTION WITH TANK MONITORING

By deploying Anova's xFluid Tank Monitoring Solution, ECO-MAXX was able to eliminate annual tank overfills entirely, reduce service, and increase volume per service.

# REFINING REFINED

From used oil to finished products, Vertex is making moves in re-refining.

*Focused on Quality.*

*Driven by Performance.*

[vertexenergy.com](http://vertexenergy.com)

ENFINITE member since 2001

# WINTER MEETING SPEAKER: KATHY WHEAT

## **Industrial Liquid Recycling Industry & Smart Tech: Doing More with AI**

*Kathy Wheat, Louder AI*

News about AI is everywhere. However, it seems like the investment necessary and the technical know-how puts AI out of reach for the average ENFINITE member.

This session will explain why that perception is inaccurate. Kathy will walk through how small to medium size businesses are implementing off-the-shelf AI tools with little-to-no tech staff. Attendees will discover how today's AI tools and strategies are delivering real value and results for businesses of all sizes, including more productivity, more efficiencies and more profits.

AI can help you with diagnostic assistance, inventory management, administrative automation and so much more. Kathy will provide you with your AI Starting Line where you will walk away with a simple roadmap to begin exploring AI for your company today.

## **Putting Customers First since 2005!**

**Experienced – Family Owned & Operated**

- Used Oil & Oil Filter Collection
- Waste Water Transportation

Proud Member Of

# Precise Wireless Radar Monitoring for Used Oil

Benefit from accurate and reliable tank level monitoring for efficient used oil collection.

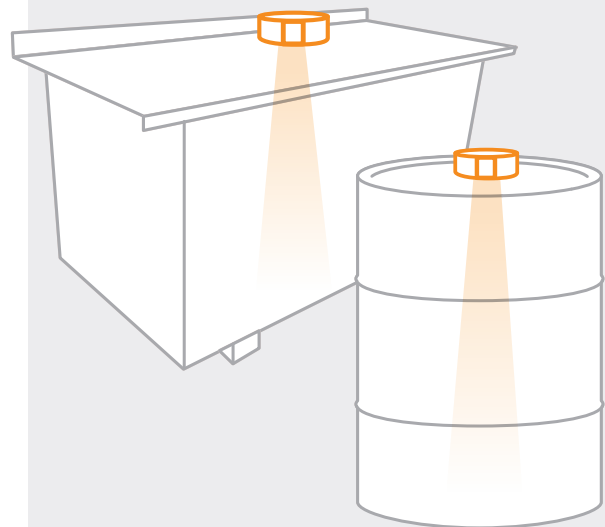

## Benefit from the best monitoring solution on the market

- ✓ Improved pickup efficiency
- ✓ Autonomous, accurate, reliable level reporting to ERP
- ✓ Detect oil theft and prevent costly overflows
- ✓ Quick and easy installation—screw-in to tank's porthole or read directly through plastic tank
- ✓ Up to 4m (13ft) radar range<sup>1</sup>
- ✓ Highly configurable reporting schedule and alarms
- ✓ SIM with LTE CAT-M1 and NB-IoT technology
- ✓ Up to 10-year industry leading battery life
- ✓ CID1 and ATEX certified
- ✓ GPS positioning
- ✓ Temperature compensated
- ✓ Five-year warranty
- ✓ Volume discounts available
- ✓ Install service and zero CapEx options available

<sup>1</sup> 4m (13ft) for hydrocarbons (diesel, gasoline, lubricants, used oil).  
6.75m (22ft) for aqueous liquids (potable water, wastewater, septic, chemicals).
